

Demolition Tools ACE PNEUMATICS PVT. LTD.

INTRODUCTION

We Ace Pneumatics Pvt. Ltd are having a wide experience of three decades of manufacturing demolition tools & rock breaker spare parts. Through our continual efforts we have developed high quality tools for an ever demanding market.

We are having in-house entire manufacturing & processing facility under one roof with advance machinery like HMC, VMC, CNC & robust grinding as well as gas carburizing furnace to produce prime quality products expected by our customers worldwide.

We produce a comprehensive range of Demolition Tools; Rock breakers spare parts, chisels that are suitable for over 450+ Rock breaker models. We have hydraulic breaker parts (and rock breaker parts) to suit Montabert, Rammer, Fine, Sandvik, Indeco, Krupp, Atlas Copco, Soosan, Furukawa, MSB, NPK, Hanwoo, T&H, Dowin, Demo, Genral Breaker, Stanly, Okada, Dozco, Ammann, Arrowhead, Poqotec, Powerking, and all other popular makes of hydraulic rock breakers.

Our Demolition tools and spare parts are made from best raw materials and heat-treated to give high wear resistance & fatigue strength to provide maximum life in robust application, such as Construction demolition trenching quarrying tunneling and mining.

As we are catering a wide range of chisels & breakers with in-house manufacturing facility. We can provide customize parts with less delivery period with highest interchangeability.

Ace Pneumatics Pvt. Ltd

Any part for any hydraulic breaker or rock breaker

WARRANTY

“ACE” tools are guaranteed against defects in raw material and manufacture.

No other warranty is implied or expressed. The company's liability in respect of any warranty claims is limited to replacement and does not extend to any other expenditure incurred or to any consequential damage.

TOOLS SELECTION & APPLICATIONS

Several factors must be identified in the process of choosing the correct tools for any specific job application. First one must determine if the job is an 'Impact' or 'Penetrative' breaking application. Correct selection of tools is the first step in obtaining maximum life from the product.

Conical Point - for general demolition work where penetrative Breaking is required.

Application - Trenching, foundation work, primary quarry breaking, Foundations, Thin and thick floors, walls, Road surfaces, transport Routes, Frozen ground

Chisels Point (Wedge Point) - as for Points but also where a cutting Action is required.

Note: Chisels give higher wear rates and stress levels in the Retainer flat areas of the tool.

Application - Trenching, foundation work, primary quarry breaking, Foundations, Thin and thick floors, walls, Road surfaces, transport Routes, Frozen ground

Moil Point (Pyramid Points) - for use where increased breakout Forces are required.

Application - Trenching, foundation work, primary quarry breaking, Foundations

Blunt Point - for impact breaking, eg. Secondary breaking and also Scaling in mines and tunnels, etc.

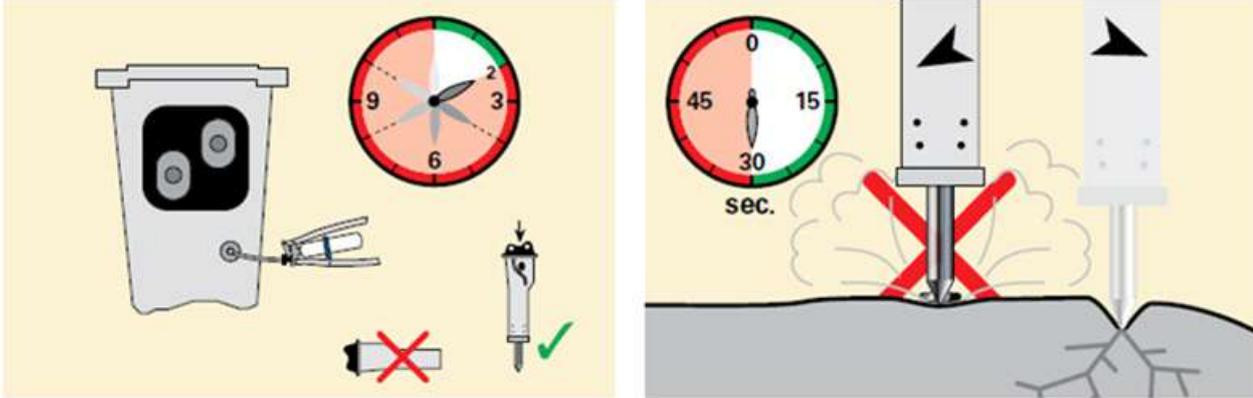

Application - Recucling, Breaking oversize's, Trenching, foundation work, primary quarry breaking

Demolition Tool Catalogue

CARE & USE

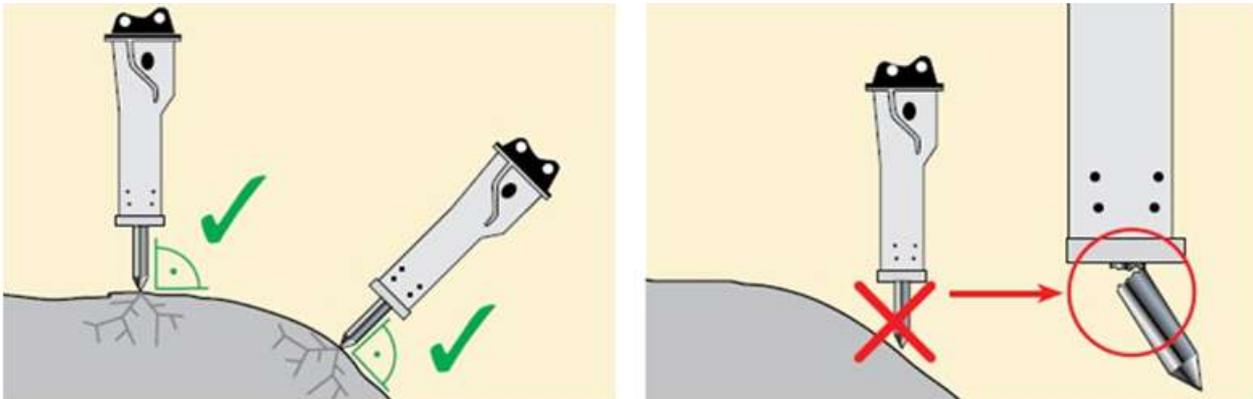

Lubrication

Lubrication of the tool/bushing with the correct quality high temperature/high pressure grease at regular intervals is essential. Such greases are best able to cope with the extreme contact pressures generated by an incorrect working angle, leverage and excessive bending etc.

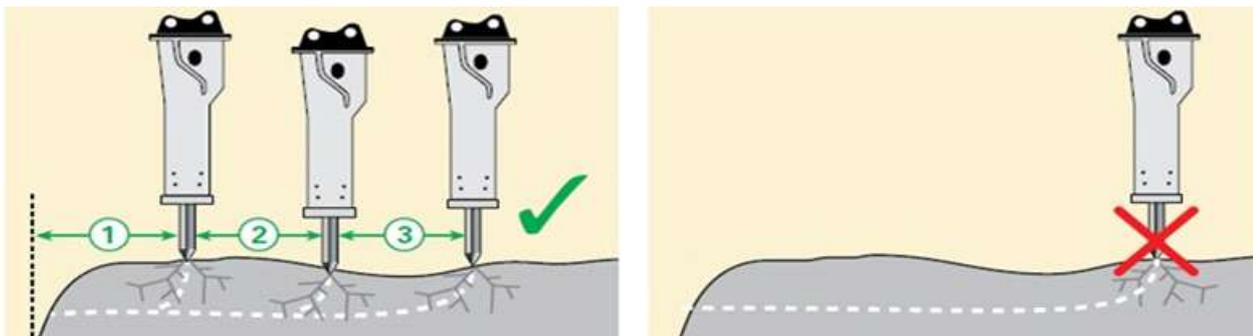

Working Angle

Critical to tool life is using the tool at the correct working angle of 90° to the working surface. Failure to do this will result in high contact pressure between the tool and the bushings and the likelihood of galling between the surfaces. In turn this can lead to failure of the tool & damage and rapid wear to the bushings. Worn bushings can allow the tool to be angled over to a position where the striking face is hit at an angle by the piston.

Advancing in large steps will decrease your performance. Advancing in small steps is more efficient and increases your productivity.

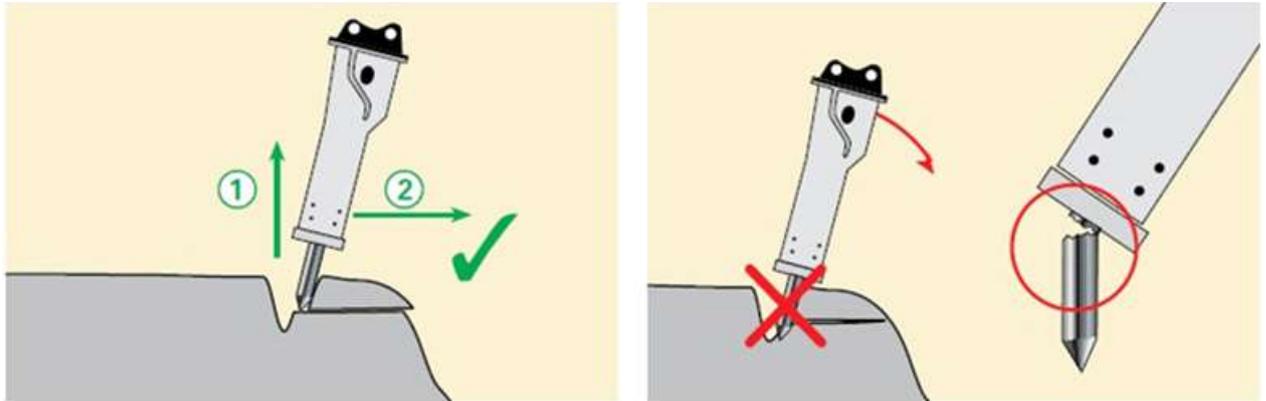

Demolition Tool Catalogue

CARE & USE

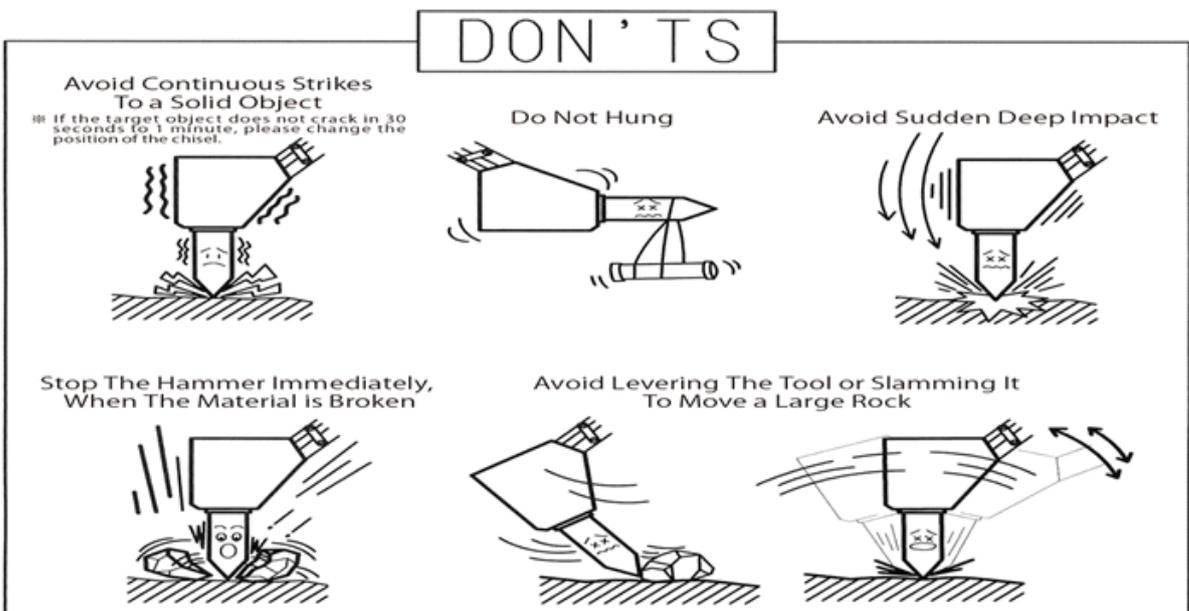

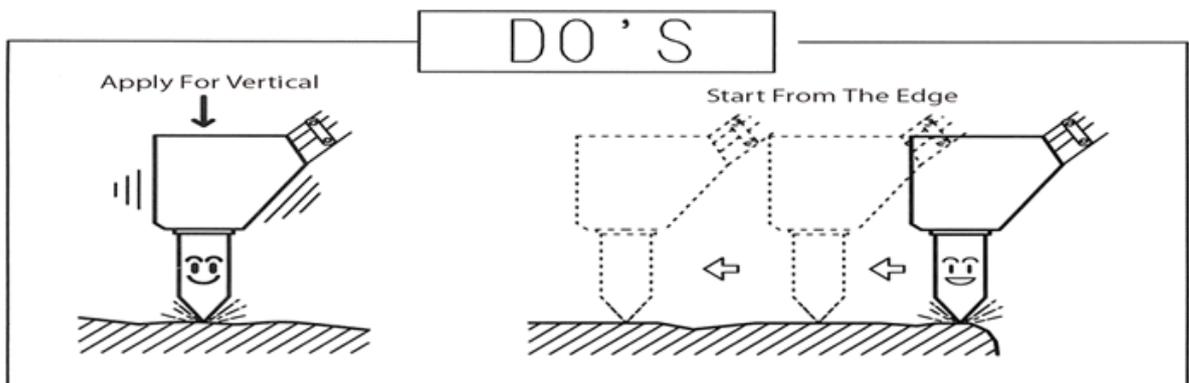

Leverage/Bending

Using the tool as a lever to help break the ground is a common tool breaker. Avoid leverage and excessive bending at all times.

Blank Firing

Continuing to use the hammer when the tool is not or only partially in contact with the work surface will result in the tool being fired down on to the retainer pin. This will cause heavy wear and damage to the upper retainer flat radius area and the retaining pin itself.

PART NUMBER DETAILS

To order tools we should know the part number & It's details .Please check the below given information about part number.

1. Tools (Demolition Tools, Working Tool , Chisel,) :-

Ex.DAEMO 2300 CHISEL (WEDGE POINT)

Points style are shown by below code

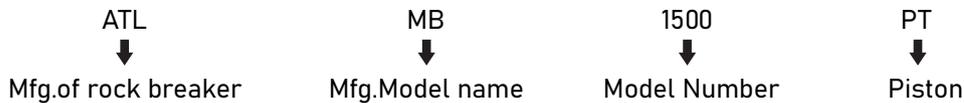

Chisels (Wedge Point) :- CP

Blunt Point :- BP

Moil Point (Pyramid Points) :- MP

2. Rock Breaker Piston:-

Ex. ATLAS COPCO MB 1500 PISTON

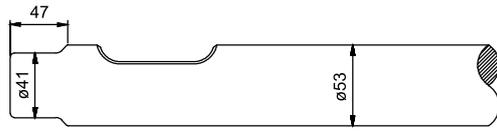

3. Rock Breaker Front Head (Lower Body):-

Ex. FINE 35 FRONT HEAD
